

Title Describing Your Work

Authors

Abstract— In the abstract section you present a brief summary of the work that is presented in the report.

Below you will find a suggested structure for your report. You can choose to reorder, rename the section but the information mentioned in these sections and outlined also in the project information should be included.

This is how you cite related work: [1, 2, 3]

This is how you reference a figure: See figure 1

1 INTRODUCTION

Introduce the problem you are faced with, the tasks you are tackling and the data available to you.

2 ANALYSIS STRATEGY OUTLINE

Here you should outline your method, the strategy that you have adopted to solve the problem at hand. Describe the goals and reasoning of the proposed approach. Outline of the overall steps you have taken to answer the questions of the challenge.

3 DATA CHARACTERISATION AND PREPARATION

Describe the data available to you. Describe their characteristics and any preparation or preprocessing you have made. Describe any additional variables you have computed.

4 RESULTS

Here you will outline the answers to the questions posed in the challenge. You can devote a subsection for each question. Go through the process you have followed to answer each question. Justify the choices you make, couple it to the questions posed, the data used, the appropriateness/characteristics of the representations/algorithms.

5 DESIGN & IMPLEMENTATION OF VA SOLUTION

Design and implementation details. What languages, libraries, tools have you used to implement your solution? Why did you choose that?

6 DISCUSSION

Discuss aspects relevant to your analysis strategy as well as implemented solution. Pros/cons of the proposed approach. Discuss various limitations posed. How/what could you have done differently.

7 CONCLUSIONS

Here you include your concluding remarks.

You can summarize the overall solution scenario you have come up with. Potentially present future work.
